I have had XM radio sence the start. The fetures they have added have only enhanced the listening expereance. If we can have this on are home cable / satellite, why are we trying to stop it on moble satilite stations. It keeps us informed of what is happening in are local areas and in areas that we travel. I would think with what is happening in the world today that you would want the commutters to be informed the best way possible. Leave satellite radio as it is. The FCC is causing enought problems with our public stations.Thank You.
